

KALINGA CHAIN OF CAFÉ

Build an application to manage chain of Cafe and their managers.

Description-

CAFÉ-

cafeId

cafeName

cafeRevenue

CafeManager

managerId

managerName

manegerSalary

One café can only have one manager but one manager can manage many café.

Build Rest Api on below scenario-

1. Add Café with their manager.
2. Get All café under a manager (Use managerId).
3. Get All Café along with manager details whose revenue is greater than entered value.

Validations-

1. Throw ManagerNotFoundException in second question.
2. Throw NoSuchCafePresentException in third question.
