

Assignment-1

CampusMind-

1. mid
2. name
3. city

Laptop-

1. id
2. brand
3. price

*one campus mind has one Laptop(@oneToone).

Generate rest api for following scenario.

1. Insert the campus minds with the respective laptop.

Example:

```
{
  "mid":"M1050761",
  "name":"Arpit",
  "city":"Banglore",
  "laptop":{
    "id":101,
    "brand":"Lenovo",
    "price":22000
  }
}
```

2. Display the laptop of a campus mind of a particular mid.

*If not found throw InvalidMidException.(Campus mind with the <mid> not found)

Note-

1. Implement spring data jpa with proper annotations.
2. Maintain proper folder structure.
